Chain Link Fencing

A **chain-link fence** (also referred to as **wire netting**, **chain-wire fence**, **cyclone fence** or **hurricane fence**) is a type of woven fence usually made from galvanized PVC-coated steel wire. The wires run vertically and are bent into a zig-zag pattern so that each "zig" hooks with the wire immediately on one side and each "zag" with the wire immediately on the other. This forms the characteristic diamond pattern seen in this type of fence.

Galvanized and PVC Barbed Wire

- Made of galvinized steel wire, PVC coated or partial PVC coated iron wire in green and other colors.
- Generally used to enforce security barrier to protect grass boundary, railway, highway and etc.

PVC coated Galvanized Wire

- Manufactured with quality iron wire
- PVC is relatively low in cost, resilient, fire retardant and possesses good insulating properties

Black Annealed Wire

Annealed Wire is made of carbon steel wire, used for weaving, baling in general. Applied for home use and the construction.

Annealed wire is obtained by means of thermal annealing, endowing it with the properties it needs for its main use - setting. This wire is deployed both in civil construction and in agriculture. Hence, in civil construction annealed wire, also known as “burnt wire” is used for iron setting. In agriculture annealed wire is used for bailing hay.
